

Support hatchling vitality with DietGel® Poultry

DietGel® Poultry is a nutrient-fortified hydration and dietary supplement designed for hatchling poultry during transport. Combining hydration, essential nutrients, electrolytes, and attractants, it helps reduce stress and supports early chick development and survival.

Why choose DietGel:

- 01 **Nutritionally balanced**
Delivers hydration and nutrition supporting early chick development
- 02 **High Consumption**
encouraged by color and odor attractants
- 03 **Non-wetting**
Hatchlings stay dry
- 04 **Contaminant Free**
Independent lab tested to be free of spoilage organisms and pathogens

Clearly Better Convenience

- 01 **Purified Ingredients**
Formulated with carefully selected ingredients to ensure safety, efficacy, and consistency for optimal animal care.
- 02 **Commercially Sterile**
Manufactured under stringent quality standards to achieve commercial sterility, ensuring product integrity and safety.
- 03 **Committed to quality**
Products are clearly labeled with lot and expiration dates, and COAs are available to ensure transparency and traceability.

Instructions

- To be administered under the direction of a veterinarian
- Manufactured for use in research animals
- Dosage: Based on an average daily water consumption of 5mls/ mouse/day, one 420ml and 450ml AquaPak® pouch will last at least 14 days for a five-mouse cage density.
